## Fishery Profile Data Analysis

---

July 1, 2018

Revised August 22, 2018 – In the 2018 U.S. Department of State’s Trafficking in Persons Report (TIP), Thailand was upgraded from Tier 2 Watch List to Tier 2. The TIP rating change does not change the CRITICAL RISK rating for the Thailand squid fishery.

Revised January 10, 2019 – The European Commission has lifted the yellow card that Thailand received in April 2015 for failing to sufficiently tackle illegal, unreported and unregulated fishing. For more information, see the European Commission’s [press release](#). This development does not change the CRITICAL RISK rating for the Thailand squid fishery.

### Profile Names<sup>1</sup> and Risk Ratings

Species <sup>2</sup>	Country <sup>3</sup>	Risk rating
Bigfin reef squid	Thailand	CRITICAL
Cuttlefish and bobtail squid	Thailand	CRITICAL
Squid, all other species	Thailand	CRITICAL

1. Profile names denote species name and country.
2. The Seafood Slavery Risk Tool uses the [Food and Agriculture Organization’s](#) (FAO) species names. For scientific and other species names, please see below.
3. “Country” refers to the flag state of vessels and/or the country where the catch is landed. The Seafood Slavery Risk Tool uses [FAO data](#) as its primary source for determining this information.

## Fishery Profile Data Analysis

### Profile Fishery Information

#### Other species names

Bigfin reef squid, *Sepioteuthis lessoniana*  
 Cuttlefish and bobtail squid, *Sepiidae*, *Sepiolidae spp.*  
 Squid, *Loligo spp.*

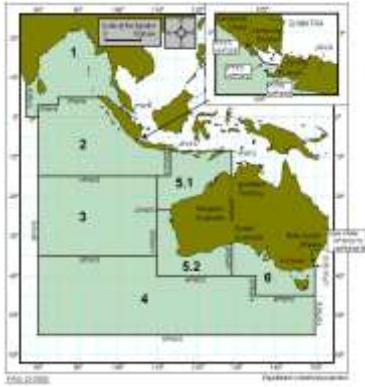

FAO data does not provide capture statistics to the species level for *Loligo*, *Sepiidae* or *Sepiolidae spp.* In 2016, Thailand landed 86,381 mt. of *Loligo spp.*, 12,389 mt. of cuttlefish and bobtail squid, and 5,205 mt. of bigfin reef squid.

Land Area	Ocean Area	Species	Scientific name	2016
Thailand	Indian Ocean, Eastern	Bigfin reef squid	<i>Sepioteuthis lessoniana</i>	1,095
		Common squids nei <sup>1</sup>	<i>Loligo spp.</i>	14,118
		Cuttlefish, bobtail squids nei	<i>Sepiidae</i> , <i>Sepiolidae</i>	3,222
	<b><i>Sub-total Indian Ocean, Eastern</i></b>			18,435
	Pacific, Western Central	Bigfin reef squid	<i>Sepioteuthis lessoniana</i>	4,110
		Common squids nei	<i>Loligo spp.</i>	72,263
		Cuttlefish, bobtail squids nei	<i>Sepiidae</i> , <i>Sepiolidae</i>	9,167
	<b><i>Sub-total Pacific, Western Central</i></b>			85,540
	<b>Total Thailand</b>			103,975

			<p><b>Burmese men who were also sold to the boat trawled international waters, catching anything from squid and tuna to ‘trash fish’, also known as bycatch – inedible or infant species of fish later ground into fishmeal for Thailand’s multibillion-dollar farmed prawn industry. The supply chain runs from the slaves through the fishmeal to the prawns to UK and US retailers. The product of Myint Thein’s penniless labour might well have ended up on your dinner plate.”</b> <i>(Emphasis added)</i></p>	
<p><a href="#">ILO-ARCM (2013)</a></p> <p>Related journal article: <a href="#">Marine Policy (2016)</a></p>	<p>Inter-governmental organization, Academic: ILO, Asian Research Center for Migration, Institute for</p>	<p>2013</p>	<p>ARCM surveyed 596 fishermen employed in four coastal provinces in Thailand from May to September 2012. “Cambodians made up the majority of respondents in Rayong and Songkhla provinces, and Myanmar migrants were the bulk of respondents in Ranong and Samut Sakhon provinces.”</p> <p>According to the report’s definitions in Section 1.4, trawlers and squid fishing boats were identified as catching squid.<sup>6</sup> Per the</p>	<p>Of the 596 fishermen surveyed, 174 (29.2%) are identified as working on vessels (including single- and twin-trawls and squid-fishing boats) that catch squid (and other species).</p>

<sup>6</sup> “**Trawlers** are fishing boats that operate during the day and at night. The trawl net is lowered into water and hauled for 4-6 hours and then is pulled back onboard, after which the fish are sorted. The net is repeatedly lowered into water. **Commercial fish such as squid** and cuttlefish, threadfin bream, big-eye, and lizard fish are selected and sorted. More than 50 per cent of the catch is trash fish. Specially designed devices such as grids can also be used to select the size or species of the catch. ...**Squid-fishing** boat refers to a fishing vessel that uses square or circular nets placed in the water to trap the catch (*e.g.*, squid or jellyfish), which are attracted by various methods, such as lighting or non-mechanical lures. These boats are officially considered **lift-net boats**.”

			for reporting human trafficking to secure their rescue.” (Emphasis added)	

Thailand’s squid fishery is assessed as critical risk based on the above evidence. The following is included for information.

INTERPOL has issued a Purple Notice on [human trafficking and modern slavery in the fisheries sector in Southeast Asia and the Pacific Islands](#). “INTERPOL Notices are international requests for cooperation or alerts allowing police in member countries to share critical crime-related information.” Purple Notices “seek or provide information on modus operandi, objects, devices and concealment methods used by criminals.” The notice states:

“The crimes of human trafficking and modern slavery in the fisheries sector are facilitated by a unique combination of economic, labour, trade, legislative, regulatory and enforcement conditions, occurring within the context of complex and lucrative global supply chains. This Purple Notice describes some of the structures and methods used by criminal networks to enable, protect and prolong their activities within this environment, and makes recommendations to assist law enforcement agencies to identify and disrupt these activities. While this notice focuses on Southeast Asia and the Pacific Islands, it is likely (but unconfirmed) that the modus operandi described here also occurs in other parts of the world.”

## Fishery Profile Data Analysis

---

Is there credible evidence of forced labor, human trafficking, or hazardous child labor in the fishing industry of the country? YES

Source URL	Source type	Year published	Summary of findings	Any remarks on the credibility of this source?
<b>Forced labor and human trafficking in Thailand’s fisheries have been extensively documented. This profile has not listed all available sources.</b>				
<a href="#">USDOS (2018)</a>	Government report: US Department of State (USDOS)	2018	<p>The 2018 USDOS Trafficking in Persons (TIP) Report cites Thailand for human trafficking in fishing as a significant concern. Per the report:</p> <p><b>“Trafficking in the fishing industry remains a significant concern. Thai, Burmese, Cambodian, Vietnamese, and Indonesian men and boys are subject to forced labor on Thai and foreign-owned fishing boats. Some remain at sea for several years, are paid very little or irregularly, work as much as 18 to 20 hours per day for seven days a week, and are reportedly threatened, physically beaten, drugged to work longer, and even killed for becoming ill, attempting to escape, or disobeying orders. Some trafficking victims in the fishing sector had difficulty returning home due to isolated workplaces, unpaid wages, and the lack of legitimate identity documents or safe means to travel.”</b> (p.418)</p>	
<a href="#">Bangkok Post</a>	Media:	2018	<b>This source reports on a Thai victim’s 15-year ordeal.</b> The article

			<p>30 per cent). The survey findings revealed higher levels of wage withholding, abusive working conditions and deception among Cambodian migrants than among migrants from Myanmar and higher levels of forced labour indicators in fishing work than in seafood processing. <b>Only 29 per cent of the fishers reported no indicators of forced labour in their work</b>, but as much as 56 per cent of workers in seafood processing reported no indicators.</p> <p>In contrast with the 2013 ILO survey findings on working conditions in Thai fishing, which estimated forced labour at 17 per cent of fishers in the Thai industry, the research method used in this baseline study was not designed to produce an estimate of forced labour. Instead, when researchers found indicators of possible forced labour during the survey session, a semi-structured extension interview was conducted with the worker. A total of 40 such interviews were conducted to explore their experiences in more detail, wherein definite violations of labour rights emerged. Comparisons of forced labour indicators covered in both studies, including measures of wage withholding and threats of violence, are detailed in section 6.” (Emphasis <i>added</i>)</p>

Criteria	Sources	Description
	<a href="#">Labour Abuse Across Thailand’s Diverse Fishing Industry</a>	<p><b>Trafficking and forced labour</b></p> <p>23. While taking note of the significant efforts undertaken to address trafficking and forced labour, the Committee remains concerned that trafficking in persons and forced labour remain and give rise to significant problems, particularly regarding sexual exploitation, fishing, agriculture and domestic work. It is concerned about reports on child labour and the exploitation of vulnerable people, such as irregular migrants and indigenous peoples. It is further concerned about reports of victims of trafficking being deported without being effectively screened for an assessment of their protection needs, and about the premature collection of their testimonies in order to facilitate prompt deportation (arts. 7-8 and 24).</p> <p>According to the <a href="#">2018 USDOP TIP Report</a>, the government increased prosecution, prevention and protection efforts. <b>However, “the government reported investigating significantly fewer cases of labor trafficking in the fishing industry in 2017; it investigated seven cases in 2017 (43 in 2016).”</b> (p. 414) In addition, <b>“corruption and official complicity in trafficking crimes continued to impede anti-trafficking efforts,” but “the government has increased efforts to address complicity.”</b> (p. 415).</p>

## Fishery Profile Data Analysis

Criteria	Sources	Description
		<p>improvements and shortcomings in Thai law and the operational practice of frontline agencies that allow victims of forced labor to fall through gaps in existing prevention and protection frameworks.</p> <p><b>...These reforms have focused primarily on establishing control over</b> fishing operations and tackling IUU fishing. Yet they have had little effect on human rights abuses that workers face at the hands of ship owners, senior crew, brokers, and police officers. Meanwhile, the impact of stronger regulatory controls on improving conditions of work at sea has been limited as a result of poor implementation and enforcement.</p> <p>In some respects, the situation has gotten worse. For instance, the government's 'pink card' registration scheme, introduced in 2014 in an effort to reduce the number of undocumented migrants working in Thailand, has tied fishers' legal status to specific locations and employers whose permission they need to change jobs, creating an environment ripe for abuse. The pink card scheme, as well as practices where migrant workers are not informed about or provided copies of required employment contracts, has become means through which unscrupulous actors conceal coercion and deception behind a veneer of compliance. In this way, routine rights abuses go unchecked as officials are content to rely on paper records submitted by fishing companies and the government employs labor inspection frameworks that fail to closely examine actual labor practices at sea."</p>

Criteria	Sources	Description
		<p>A 2017 International Justice Mission study, <a href="#">Not in the Same Boat: Prevalence &amp; Patterns of Labour Abuse Across Thailand’s Diverse Fishing Industry</a>, also documents that enforcement of legislation is still challenging and overwork, underpayment, debt bonding, violence, etc. are still common experiences among migrant fishermen on Thai vessels.</p> <p>Thailand’s first conviction of a business owner for forced labor in fishing was handed down in 2017.<sup>9</sup></p>

\* It may be acceptable where a State has not ratified any of the convention(s) listed above, that a State has passed and brought into effect wholly and fully legislation and relevant accompanying regulation, where needed to implement legislation, that is at least materially identical in substance, intent, effect and spirit to the provisions of the relevant convention(s). It is expected that relevant legislation and regulation will include provisions that are suitably onerous and comprehensive in nature and intent to provide for its full and proper enforcement. Where this is the case, the country may be assessed as fulfilling the country criteria, despite the non-ratification(s).

\*\* The assessment of a country’s enforcement relies primarily on comments by the Committee of Experts on the Application of Conventions and Recommendations, which supervise the application of ILO conventions, and the U.S. Department of State’s Trafficking in Persons Report. Both sources are credible, global in scope, and publicly available. Additional, credible sources may also be used. This assessment does not constitute a full and complete analysis of law enforcement in any country.

## Fishery Profile Data Analysis

---

Is there credible evidence of forced labor, human trafficking, or hazardous child labor in seafood processing, agriculture, forestry, or aquaculture in the country?\* N/A

Source URL	Source type	Year published	Sector / Industry	Summary of findings	Any remarks on the credibility of this source?
Not applicable when a fishery is assessed as critical risk.					

\* Evidence of forced labor, human trafficking, or hazardous child labor in a country's seafood processing, forestry, agriculture, and aquaculture industries may be examined as *indicators* of risk for the at sea portion of a fishery. See the Seafood Slavery Risk Tool's conceptual model to view which pathways trigger an examination of related or similar renewable resource industries.

## Summary of Risk Rating

Thailand's squid fishery is rated CRITICAL RISK. Academic, NGO, and media sources document forced labor and human trafficking in the fishery. For example, the International Labour Organization and Asian Research Center for Migration's 2013 study surveyed 596 fishermen, 174 (29.2%) of which are identified as working on vessels (including single- and twin-trawl and squid-fishing boats) that caught squid (and other species). According to the report, of the 47 respondents working on twin trawl boats, 30% were forced laborers. In addition, in 2014-15, investigative journalists with *The Guardian* and *Associated Press* interviewed Burmese victims who said they caught squid and other high-value species on Thai boats. **When a critical risk has been established, adherence to the Seafood Slavery Risk Tool's country criteria and other mitigating circumstances are not factored in the fishery rating.** However, it is important to note that evidence from 2017-18 shows that the risk **of forced labor and human trafficking remains high in Thailand's fisheries even though the Government is making significant progress to combat human rights abuse in the industry.** Nevertheless, enforcement of regulations still presents a major challenge. While the U.S. Department of State's 2018 Trafficking in Persons report upgrades Thailand's rating from Tier 2 Watch List to Tier 2 in recognition of the Government's substantial efforts, it also states that significant challenges remain in the fishing industry. In addition, the 2018 Global Slavery Index's Fisheries analysis rates Thailand's fishing industry as having a high risk of modern slavery. The Risk Tool team will continue to monitor
